

Give your workforce access to AI — without giving up control.

An agentless, controlled, governed, and auditable gateway for employee use of AI — with policy enforcement, audit visibility, sensitive-data controls, budgets, and customer-controlled deployment.

THE CHALLENGE

Employees already use public AI tools to write, summarize, translate, and analyze. Unmanaged use creates security, compliance, privacy, data-exposure, and cost risk — with no record of what was sent, to which provider, or by whom.

THE FRAME360 GATEWAY

Frame360 centralizes access, applies organizational policy, records activity, and helps reduce sensitive-data exposure — routing every request through identity, policy, and audit to centrally governed, approved providers.

CORE CAPABILITIES

01 Multi-LLM Access

Approved models and providers in one controlled workspace.

02 Policy-Based Controls

Control which models, actions, and content are allowed.

03 FinOps Budget & Usage

Set limits by user, group, department, model, or org — with FinOps cost visibility.

04 Audit & Visibility

Searchable records of usage, decisions, and interactions.

05 Sensitive Data Controls

Detect, warn, mask, or block before content is sent.

06 SSO & Identity

Map users, roles, and groups to organizational identity.

07 Customer-Controlled Deployment

Agentless — on-prem, private cloud, or your own environment.

08 Provider Governance

Centrally govern access to approved AI providers.

09 AI Workflow Integrations

Chat, compare, translate, web search, and beyond.

SECURITY & GOVERNANCE

- ✓ Centralized, policy-controlled provider access
- ✓ Identity-based access and per-user permissions
- ✓ Searchable audit trails of activity and decisions
- ✓ Configurable controls on data leaving the org
- ✓ Agentless — no endpoint agents to deploy
- ✓ Per-tenant isolation in controlled environments
- ✓ Usage and budget visibility across the org

DEPLOYMENT OPTIONS

On-Premises

Run entirely within your own data center.

Private Cloud

Isolated tenant under your security controls.

Air-Gapped / Customer-Controlled

Any environment you govern — including fully air-gapped networks.

Let your workforce use AI — on your terms.
